## Save the tutorials on this site on your PC

Updated October 14, 2010

### The subject

Gert Oskar was the first to fill in my [questbook](#). On this occasion, it reminded me that one of his old applications consisting of to dispose of my various tutorials in PDF format in order to consult them freely without connected to the site. The management of this site, as well as the creation of its content, take lot of time, but I'd like it!). Therefore, I do not have the possibility of also format my tutorials in a second presentation format.

You'll also note that I have not found the time to make these tutorials English version. I'm trying to simply verify that the original version in English is almost understandable once translated by "Bing Translator". Therefore me still less possible to envisage making English version in PDF format...

Of course, I found a solution, easy to implement, and which will allow you to create PDF files in the language of your choice (within the limits of those proposed by "Bing Translator", and with its small flaws, but as often said me my father, "better is more expensive!")

The content of this site is entirely free 😊 reassure you, I continue to offer you free solutions. (but always quality) We are going to install the software free [pdfcreator](#) whose function is to create a virtual printer. Print output in this case is a PDF file. We will then use this new virtual printer to save webpages containing tutorials, this after have correctly implemented them pages.

You can then use this new virtual printer for any other use involving the creation of PDF files from any software able to print.

### Install Pdf Creator

Let us install [pdfcreator](#) on our PC to the Web address mentioned in our links page. You will arrive on this page of the site software free sourceforge.net...

Click on the button download. Depending on the browser you use, the installation procedure will slightly change. With Internet Explorer, a window opens offering choice:

- to run the software
- save it
- or exit the procedure.

Choose "Run". The SourceForge.NET site is very serious, and proposed software are free of viruses. With Firefox, you will need to choose "Save", then go to the directory in which file will be downloaded and then double click PDFCreator - 1\_0\_2\_setup .exe to run the installation file.

**Tip:** If you don't know in what directory firefox saves the uploaded files, you can find out by opening the menu "Tools > > General Option"

Vista and Seven will ask you to confirm that you are at the origin of this installation 😊

Select language dialog software, validate the acceptance of the license, and answer the different questions.

Uncheck the Yahoo Search Engine Setup by default (unless it's your choice!) to preserve your configuration, and then validate the other choices. Installing the software can then start.

Refine your technique of shooting!

Thierry Philippon, responsible for site [www.magazinevideo.com](#) just created 2 training DVDs (only existing in Europe) providing the

- September 25, 2010: become the 5th element!
- 19 September 2010: the hidden themes for Pinnacle Studio 14.
- 12 September 2010: today is

Typically, installation kit detects the language of Windows Setup, and offers you the corresponding settings by default.

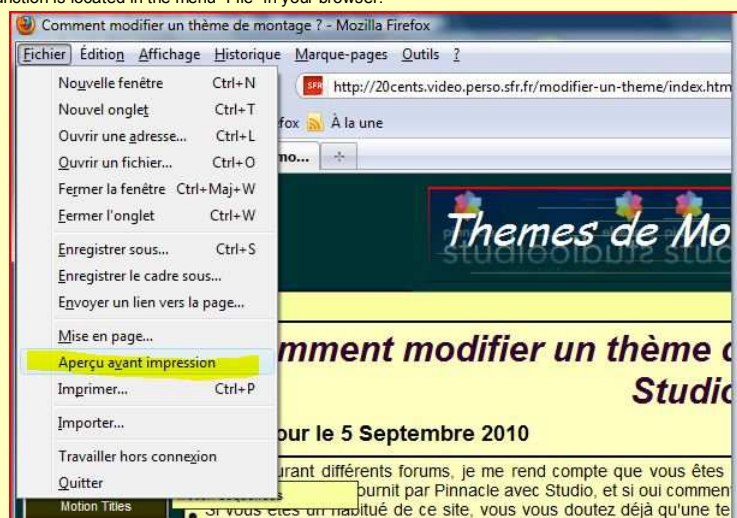

At the end of the installation, it will be necessary to restart your computer for the virtual printer is taken into account.

## Setting the page layout

To create our PDF files, you'll simply use our Web browser printing function.

Of course, before printing, it is prudent to use the preview before printing to see and possibly adjust the settings to obtain the desired rendering. This function is located in the menu "File" in your browser.

Here, you can choose to adjust the scale (important because the sheet of paper is less broad than your screen, and it is therefore necessary to reduce the level to find a correct layout...)

If you print in portrait mode, a level of 60% will give you a correct result.

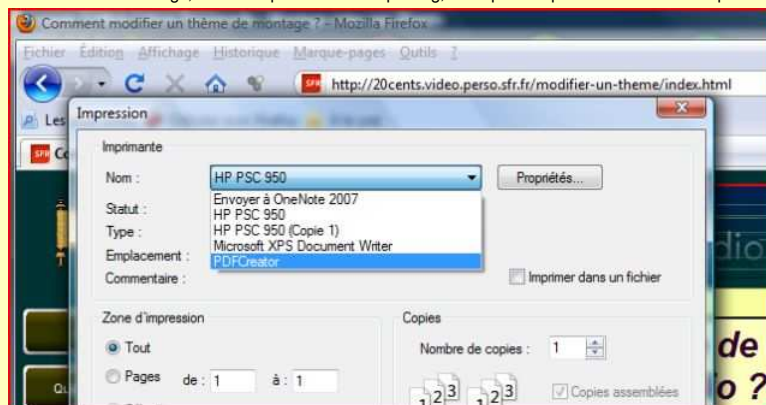

"Layout" option will also allow you to adjust the left and right margins. Be careful however to not reduce it if you can then print your document. Most printers are not able to print the entire width of the paper.

**A note:** your settings will be preserved across sessions

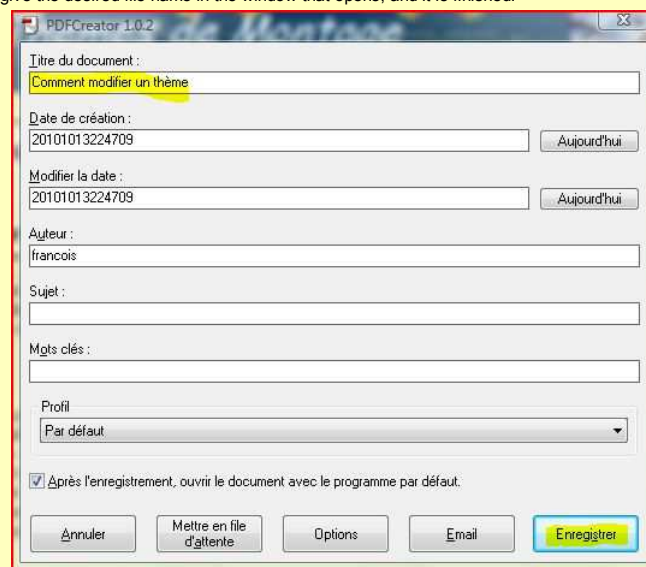

## Printing

When you are satisfied with the settings, close the preview before printing, and open the print menu. Select the printer PDFCreator.,

It is now necessary to give the desired file name in the window that opens, and it is finished!

## Translate tutorial into another language!

Nothing simpler! If you use the automatic translator of this site, your PDF file will naturally be the result of the translation. If you want to print a tutorial in another language, just select it in the Widget the language selection, and then print in PDFcreator.

In demonstration, here's the PDF in English and French products according to this technique.
